

Tagline on Marine & Waterways image –

“Enabling marine and waterways operators and administrators to address their key challenges of growth, safety, and profitability.”

Introduction –

Geospatial management solutions enable the port operators, Hydrographic offices and administrative agencies to address their key challenges, in a growing but cyclical industry. Governments across the world are focusing on making port operations more efficient and the use of inland waterways for passenger and goods transport.

IIC technologies’ Marine and waterways solutions and consulting services address key opportunities and challenges for operators ranging from international mega ports, to private jetties and inland waterways.

One stop solution for all geospatial solutions -

- ✓ **Integrated Value Chain:** With offerings across the entire value chain, from surveys (hydrographic and topographic) to solutions integrating geospatial, with port operations, we offer end-to-end solution, to a customer base across the globe.
- ✓ **International Expertise:** Our qualified workforce, uses experience of serving our global customer base, to implement industry best practices, and international (IHO) standards.
- ✓ **Multi-disciplinary Skillset:** IIC Technologies’ suite of offerings comprises domain knowledge with varied skillset such as hydrographic and terrestrial survey along with software development, providing a one-stop-shop for solutions to manage the traffic and assets, at the port and its hinterland.
- ✓ **Strategic Partnerships:** We have strategic partnerships with niche service providers, to incorporate state-of-the-art modeling and simulation capabilities into the integrated solutions.

IIC solutions – (Sample layout below, we need have icons against each solution, brief description of the solution and learn more link, on clicking the [learn more](#) link, a pop up should open with further details of the respective solution)

Port and inland waterways solutions	<u>Solutions for National Hydrographic offices</u>
R&D and feasibility studies	Hydrographic Database services
Port navigation services	Hydrographic data processing
Engineering solutions	Navigation Data products
Asset management solutions	Validation & Maintenance products
Data services	
River navigability solutions
